

POLYTECHNIC ADVANTAGE

Bismarck State College North Dakota's Polytechnic Institution

As North Dakota's Polytechnic Institution, learning is hands-on and grounded in the principles of STEAM (science, technology, engineering, the arts, and mathematics). The programs are designed in collaboration with business and industry partners focusing on high-priority occupations. Students learn during internships, through cooperative projects, and in state-of-the-art classrooms. Whether studying arts and sciences or pursuing highly technical programming, North Dakota's Polytechnic Institution prepares students to be workforce ready and succeed wherever their educational journey takes them.

Career Pathways

Programs offered by North Dakota's Polytechnic Institution are developed in partnership with employers, alumni, and other working professionals, along with many business leaders included on BSC's Business Industry Leadership Teams (BILTs). These groups provide strategic advice, feedback to our faculty, and leadership on industry trends directly impacting the curriculum for programs and courses. This direct access to industry leaders and employers is a primary reason why BSC students have such a high placement rate after graduation.

Experiential Learning

Students learn through a hands-on approach that combines in-depth study with practical, technology-based skills training. This applied learning approach is a unique characteristic of polytechnic institutions — it is intense and highly technical, but also incredibly rewarding. As students pursue a degree or certificate, they will engage in hands-on learning grounded in the principles of STEAM preparing students to solve interconnected social, economic, and community problems to achieve success in the workforce. The education students receive from BSC provides them with a distinct edge in an Industry 4.0 driven world.

STEAM

STEAM education is an integrated approach to learning that uses Science, Technology, Engineering, the Arts, and Mathematics to guide students and open their minds to the world around them. Advancing on the foundation of STEM, which embraces creativity, collaboration, critical thinking, and communication, STEAM complements by further embracing curiosity and connection.

Hands-on education and experiential learning afford students a unique opportunity to gain an understanding and awareness for how they learn. Through this awareness, relevant and purposeful learning occurs. BSC endeavors to weave the principles of STEAM throughout programs by aligning with the needs of business and industry. Students learn and develop employable skills that are job specific: leadership, initiative, entrepreneurship, reliability, planning and organizing, critical thinking, problem solving, communication, and teamwork.

Study Abroad

Studying abroad is an amazing, once-in-a-lifetime experience that has many academic, professional, and personal benefits. Studying abroad provides a great resume builder, is a valuable experience, aides in the development of cross-cultural communication skills, increases cultural awareness, provides leadership skills and independence, and establishes connections throughout the world.

Students with an interest in studying overseas can do so through Bismarck State College. Students who are in good academic standing (minimum 3.0 GPA) are offered the opportunity to study at a school abroad. Overseas credits and grades will be converted back into BSC transfer credits. If you qualify for Financial Aid, that can be applied towards your overseas fees. Tuition costs at the overseas institution vary and are influenced by currency exchange rates. Tuition is paid directly to the foreign institution.
