

COMPUTER NETWORKING

Program Description

Computer Networking courses will provide the learner with the fundamentals of computer networking, including the practical and conceptual skills needed to understand basic networking, build simple local area networks, perform basic device configurations, implement IP address schemes, and configure and troubleshoot routers and switches. Additionally, learners will gain the necessary skills and knowledge to install, configure, customize, optimize, and troubleshoot the Microsoft Windows operating system in a stand-alone and network environment, including installing and managing Microsoft Server and its roles.

The Program Certificate in Computer Networking is a great way to kick-start your career. You may choose from online and on-campus course delivery options. This flexibility allows you to complete coursework at your convenience and on your schedule.
