

CYBERSECURITY FUNDAMENTALS

Program Description

Cybersecurity Fundamentals Program Certificate is a knowledge-based curriculum that validates the learner's understanding of fundamental cybersecurity, network security, cloud security, SOC security, information security, and networking.

Learners will identify and protect against cyberattacks by understanding the fundamentals, principles, and concepts of cybersecurity. They will learn how to create interfaces, security zones, authentication, and policies — all for next generation firewalls.

The Program Certificate in Cybersecurity Fundamentals is a great way to kick-start your career. All courses are offered online. This flexibility allows you to complete coursework at your convenience and on your schedule.
